

IPSEN IN NORTH AMERICA

Ipsen is a global, biopharmaceutical group focused on innovation and specialty care. The group develops and commercializes innovative medicines in three key therapeutic areas – Oncology, Neuroscience and Rare Diseases. Our presence in North America dates back to 1976, and now includes Ipsen’s third global hub right in the heart of the leading global biotech ecosystem in Cambridge, Mass., where a fully integrated biopharmaceutical team across External Innovation and Partnering, R&D, Manufacturing and Commercial operations collaborates. With Ipsen’s expansion of its footprint in Cambridge, and new North America headquarters in Kendall Square, the group is building a sustainable innovation engine within the biotech community.

OUR PRESENCE IN NORTH AMERICA

Ipsen employs approximately 600 people in the U.S. and Canada, who are building a strong legacy of helping patients with difficult-to-treat diseases.

SCIENCE MADE PERSONAL

Our mission is to provide hope for the patients whose lives are challenged by difficult-to-treat diseases across our core focus areas: Oncology, Neuroscience and Rare Diseases. Our open innovation, development and commercialization approach represents the best of how we regard science – working in close partnership with like-minded partners who have promising assets aligned with our core therapeutic areas. Our biotech mindset – combined with the scale and advantages of a global biopharmaceutical company – has already established us as a development and commercial powerhouse in our core focus areas, with a proven ability to bring new therapies to market.

OUR PEOPLE

At Ipsen, people are our most valuable resource. We cannot become a leading global biopharma company without experienced, talented, skilled, ambitious, focused employees who power our transformation. We have developed a culture that cares deeply about our people and gives them the opportunity to learn, develop and grow so they can focus on what matters – delivering results for patients.

PASSION FOR PATIENTS

Our leadership is always in the community, connecting and actively listening to understand the needs of patients and those who work relentlessly to discover medicines for difficult-to-treat diseases. In fact, it was at the recommendation of a patient that we recently updated the scope of our award-winning patient access program, IPSEN CARES® (Coverage, Access, Reimbursement & Education Support), which serves as a central point of contact between patients, caregivers, doctors’ offices, insurance companies and specialty pharmacies. This program was designed to help simplify the process of applying for and helping eligible patients get coverage for Ipsen medications, as well as related care. With the creation of Ipsen’s third global hub in one of the most vibrant life science ecosystems, along with acquisitions, partnerships and scientific collaborations and innovations, Ipsen teams are focused on delivering for the patients we serve. We collaborate with notable industry, academic and patient advocacy groups across the healthcare landscape, such as:
